REBEL SAFETY GEAR

INTERNATIONAL AND LOCAL FOOTWEAR STANDARDS

All REBEL safety boots and shoes comply with the stringent international standards required by the most recent ISO standard for safety footwear – ISO 20345:2021. The South African Bureau of Standards (SABS) adopted the latest ISO standard in 2023, and so the new SANS 20345:2023 standard is exactly the same. The NRCS (National Regulator for Compulsory Standards) is the government body tasked with ensuring that all safety footwear sold in South Africa is compliant with SANS 20345:2023.

ISO 20345 Markings – Main Classifications

Safety footwear is classified into the following main categories, which can be identified on the tongue label of the footwear:

CLASSIFICATION AND MARKING	ATTRIBUTES OF THE FOOTWEAR
SB	- The footwear has a toe-cap that can withstand impact and compression of 200J. - The sole of the shoe/boot has passed the slip resistance requirement for NaLS (Sodium Lignosulfate – essentially a soapy solution) on a ceramic surface.
S1	As for SB, but also includes: - Closed heel region. - Energy absorption of seat region. - Anti-static properties.
S2	As for S1, but also includes: Water resistant upper.
S3 (metal insert Type P) S3L (non-metal insert Type PL) S3PS (non-metal insert Type PS)	As for S2, but also includes: - Anti-perforation insert according to the specified type. - Cleated outsole.

ISO 20345 Markings – Additional Attributes

Added protection can be built into the footwear, and it will be marked on the tongue label as follows:

CLASSIFICATION	ATTRIBUTES OF THE FOOTWEAR
P	Perforation resistance provided by a metal insert built into the sole.
PL	Perforation resistance provided by a non-metal insert built into the sole (4.5mm nail).
PS	Perforation resistance provided by a non-metal insert built into the sole (3.0mm nail – a stricter standard).
C A	Electrical properties – partially conductive. Electrical properties – antistatic footwear.
HI CI	Resistance to inimical (hostile) environments – heat insulation of outsole. Resistance to inimical (hostile) environments – cold insulation of outsole.
E	Energy absorption of seat region.
WR	Water resistant shoe (the entire shoe is water resistant).
WPA	Water penetration and absorption (only the upper of the shoe is resistant to water penetration and resistance).
M	Metatarsal protection.
AN	Ankle protection.
CR	Cut resistance.
SC	Scuff cap abrasion.
SR	Slip resistance – Glycerine on a ceramic surface (note that Slip resistance – NaLS on a ceramic floor is compulsory).
HRO	Outsole is resistant to hot contact.
FO	Outsole is resistant to fuel oil.
LG	Ladder grip is incorporated into the outsole design.

Please refer to the tongue label to identify the specific safety and protection properties built into your pair of REBEL boots or shoes. It is important that the specific style and size of boot or shoes selected for use meets the requirements for your environment and application in which it will be used.

When the environment is not known, it is important to consult with your safety specialist to ensure, where possible, that the correct footwear has been provided.

CARE GUIDELINES

REBEL safety footwear has been designed and manufactured to be worn in most industrial areas, although extreme temperatures, environments and conditions will shorten the footwear's lifespan.

It is important to take time to care for your safety footwear. Proper care will add to the lifespan of your footwear, it should ensure that the maximum comfort level is maintained for longer, and that hygienically, your shoes or boots do not contribute to health problems.

Safety Footwear Care Tips

- Avoid scuffing the upper leather or treading on sharp edges that could cut or tear the sole.
- Clean your shoes regularly.
- Remove excess mud and dirt and wipe clean with a damp cloth and allow drying thoroughly, preferably overnight at room temperature.
- Soles should be checked regularly and stones and metal shavings removed from the cleats.
- Never force dry your shoes or boots if they become wet, as direct heat may distort the upper and cause the leather to crack.
- If your footwear has a leather upper apply a good quality wax polish or shoe cream regularly with a shoe brush.
- If your footwear has a Nubuck or suede upper, use a protectant spray to create a barrier against dirt, water and stains. For mild stains, rub the footwear with a stiff bristled brush or an eraser. For stubborn stains, use suede cleaner available from most footwear outlets, or a mild soap solution with a damp cloth.

- Never immerse your shoes in water, or wash in a washing machine.
- If the laces become worn, replace immediately to ensure a good fit.

Lifespan Of Safety Footwear

There is no set guide for how long your footwear will last. It depends on the environment in which it has been used and stored.

Storing Footwear And The Risk Of Hydrolysis

Most safety footwear (including REBEL) soles are made from polyurethane (PU). PU has the right mix of abrasion resistance, lightweight properties, shock absorption and cost effectiveness. However, PU is a chemical compound which can degrade over time if it is not used regularly, or if it is stored in a dark and/or humid environment without regular use. If your boots have sat unused for a long period of time (approx. three years) and then you start using them again, there is a high risk that the sole may disintegrate, this is known as hydrolysis. We cannot be held responsible for this disintegration if it results from long periods of storage.

Water Damage

Most safety footwear is made from leather. Leather is NOT waterproof, or water-resistant, unless it has been specifically treated. If your boots are repeatedly exposed to water and mud, and they are not listed as water-resistant, they will eventually crack. We will view this as improper use, and will not replace any shoes which have become damaged as a result. If you polish your boots regularly, then the polish will protect against occasional – NOT regular – water exposure.

CRUIZA RANGE

CRUIZA

Applications And Environments

The REBEL Cruiza range of PU clogs provide comfort and style. The design is crafted with high energy rebound fluid-form polyurethane (PU), making them super-light and incredibly comfortable. These clogs prioritise your wellbeing, providing optimal comfort, foot climate and posture-enhancing support.

Suitable for people who spend an extended amount of time on their feet, from the hospitality, medical and healthcare professions, cleaning, and janitorial functions to gardening and landscaping.

REBEL Cruiza Range are ISO 20347 certified.

Special Features

ANTI-SLIP

Superior anti-slip sole to minimise the risk of workplace accidents.

LIGHTWEIGHT

Super lightweight design without compromising durability.

FLUID RESISTANT

Resistant to blood, fat and detergents. Cleat pattern specially designed to eject the accumulation of any dirt, mud, and food residues.

FOOT CLIMATE

Designed to provide an optimal foot climate throughout the day.

HYGIENIC

Hygienic, anti-microbial and deodorising. They are washable, including the footbed.

POSTURE ENHANCING

Posture enhancing – resulting in reduced ankle, knee, hip and back pain, which enhances worker productivity.

ISO 20347: Confidence You Can Stand On

When your job keeps you on your feet, you need more than just comfort—you need certified protection you can trust. That's where **ISO 20347** comes in. This international standard sets the benchmark for **occupational footwear** that's designed **without a safety toe cap**, but still delivers **exceptional slip resistance, durability, and performance** in demanding work environments.

What Does ISO 20347 Mean for You?

- **Slip-Resistant Soles** – Stay sure-footed on slippery floors, wet surfaces, and unpredictable terrain.
- **Shock Absorption & Support** – Reduce fatigue with cushioned insoles and ergonomic support for long shifts.
- **Breathability & Comfort** – Designed with materials that keep your feet dry and comfortable all day.
- **Work-Ready Durability** – Made to handle the wear and tear of daily professional use—without compromise.

Perfect for:

- Healthcare heroes
- Hospitality professionals
- Retail workers
- Cleanroom & lab staff
- Hairdressers & beautians
- Anyone who needs comfort and grip—without a safety toe

ISO 20347-certified footwear isn't just compliant—it's your daily partner in comfort, safety, and performance. Because when you're on the move, you deserve footwear that moves with you.

*Type I/** Type II	*Type I	*Type I	*Type I	**Type II	**Type II
OB	O1	O2	O3	O4	O5
Closed seat region, anti-static properties, energy absorption at the seat region	As O1 + water penetration & absorption of the upper	As O2 + penetration resistance & cleated outsole	Antistatic properties & energy absorption at the seat region	As O4 + penetration resistance & cleated outsole	Basic requirements for occupational footwear without toecap protection
*Type I – Footwear is made from leather and other materials excluding all-rubber or all-polymeric footwear. ** Type II – All rubber (i.e. entirely vulcanized) or all-polymeric (i.e. entirely moulded footwear).					

CARE GUIDELINES

REBEL Cruiza PU Clogs are popular for their comfort and durability but do still require care for maintenance. The black and dark coloured clogs are low-maintenance colours for not showing up dirt and daily grime as opposed to the white & light colours which are less forgiving when it comes to staying clean. Daily care and regular cleaning helps extend their life, preserve their colour and maintain hygiene.

- Always remove the footbeds before wiping & cleaning the clogs.
- Use a damp soft cloth or sponge with warm water and a very mild soap like Sunlight liquid (just a few drops) or Sunlight bar soap to wipe off dirt, dust and to remove spills and grease.
- Avoid harsh scrubbing to prevent surface damage of the PU clog.
- If the outsoles are soiled or muddy, tap them together to loosen and knock off dry dirt, mud or debris, rinse under running water and use a soft bristle brush (old toothbrush or nail brush) to remove any stubborn debris out of the tread and grooves where dirt and grease builds up.
- Clean the outsoles regularly to maintain slip resistance and safety grip.

- Do not place into a washing machine, industrial washer and do not immerse the clog into a bucket to clean.
- The Cruiza Clogs are not autoclavable.
- Afterwards wipe with a clean damp cloth to remove any soap residue
- Allow to air dry naturally upside down or tilted for tread drainage.
- Do not place in front of a heater or open flame and do not place in direct sunlight to dry.
- Scuffs, oil splashes and spills (especially food-based like turmeric, tomato sauce or coffee etc.) show up quickly on pale-coloured clogs. Once stained, (especially with food dyes, ink or certain industrial residues) it's harder to fully remove the mark without affecting the colour.
- White & pale clogs often used in hospitals, kitchens and workshops, tend to yellow to dull or yellow with exposure to UV Light, chemicals and even sweat due to oxidation. If using the light-coloured clogs in a stain-prone environment, these would require more frequent cleaning to maintain a fresh appearance.
- Wearing of socks is a personal choice & depends on your preference, and comfort.

- However, we do recommend wearing socks with our Cruiza Clogs as they assist by providing a layer between the clog and your foot, easing friction and preventing blisters.
- With feet releasing moisture through sweat every day, socks assist by wicking moisture away from our feet and keeps them dry.
- It is therefore good hygiene practice and advisable to remove the comfort footbed at the end of every working day from the Cruiza clog.
- This allows both the footbed & clog to air out naturally, reducing moisture and odour build-up.
- This helps to maintain the overall hygiene and longevity of both the footbed and your clogs.
- Footbeds should be regularly gently wiped down with a damp cloth and mild soap solution.
- For a more intense clean, use a soft brush (an old toothbrush) and a solution of warm water and mild detergent. Lightly scrub to remove sweat, odours or stains.
- Rinse with a clean damp cloth and air-dry flat in a shaded and ventilated area.
- Avoid drying directly in the sun, tumble dryers or heaters which may cause shrinking or warping of the footbed.
- If the footbeds show signs of wear (flattening, odour retention, cracking) replace them to maintain support and hygiene.
- Replacing your footbed rejuvenates comfort and increases longevity when needed.

WHAT TO AVOID

- Bleach, ammonia or any harsh chemicals as this will damage or yellow the PU
- Solvents (acetone, turpentine etc.) - may dissolve the surface coating
- Abrasive pads or steel wool - can scratch and wear down the material
- Machine washing, sterilizing (autoclaving) or tumble drying - high agitation and heat will deform and damage the clogs.
- This clog is made from fluid PU.
- PU is biodegradable and therefore does hydrolyse over time.
